

WEB 2020

Forward

The Eighth International Conference on Building and Exploring Web Based Environments (WEB 2020) continued a series of events on Web-related theoretical and practical aspects, focusing on identifying challenges for building Web-based useful services and applications, and for effectively extracting and integrating knowledge from the Web, enterprise data, and social media.

The Web has changed the way we share knowledge, the way we design distributed services and applications, the way we access large volumes of data, and the way we position ourselves with our peers. Successful exploitation of Web-based concepts by Web communities lies on the integration of traditional data management techniques and semantic information into Web-based frameworks and systems.

We take here the opportunity to warmly thank all the members of the WEB 2020 technical program committee, as well as all the reviewers. The creation of such a high quality conference program would not have been possible without their involvement. We also kindly thank all the authors who dedicated much of their time and effort to contribute to WEB 2020. We truly believe that, thanks to all these efforts, the final conference program consisted of top quality contributions. We also thank the members of the WEB 2020 organizing committee for their help in handling the logistics of this event.
